PROFESSIONAL SUMMARY

IT Specialist and security practitioner with 3+ years of hands-on experience in cybersecurity operations, infrastructure hardening, and security automation. Designed and executed phishing simulation campaigns, operated SIEM platforms, built vulnerability scanning tools, and developed Python/Bash automation scripts. Currently completing a B.S. in Informatics at Georgian-American University. Actively training on HackTheBox. Open to vulnerability analyst, SOC, and security engineering roles — on-site in Georgia or remote across Europe.

WORK EXPERIENCE

IT Specialist | GSG 2007 — Tbilisi, Georgia

July 2024 – Present

- Design and execute end-to-end phishing simulation campaigns using GoPhish with custom HTML/CSS email templates and realistic landing pages
- Monitor security events via SIEM, triage alerts, and support incident response across Windows, Linux, and macOS environments
- Develop Python and Bash automation scripts for security monitoring, patch compliance, log analysis, and user provisioning
- Manage network security infrastructure — VPN, firewalls, DNS/DHCP, MFA enforcement, and least-privilege access controls
- Configure and deploy endpoints with security hardening policies including disk encryption, MFA, and CIS benchmark controls
- Manage user lifecycle — onboarding, offboarding, account provisioning, and IT asset inventory management

IT Specialist | Finnish International School — Saguramo, Georgia

October 2023 – May 2024

- Administered multi-platform IT infrastructure including networks, servers, and computer systems across Windows, macOS, and Linux
- Performed system hardening, patch management, and security audits to minimize attack surface
- Configured and maintained network equipment, VPNs, and security policies ensuring secure connectivity
- Delivered 1st/2nd line technical support for hardware and software systems, minimizing downtime

TECHNICAL SKILLS

Security	Vulnerability Management, CVSS v3 Scoring, SIEM Operations, Threat Detection, Penetration Testing, Incident Response, Phishing Simulation, GoPhish, Burp Suite, Nessus, Metasploit, HackTheBox
Scripting	Python, Bash, PowerShell, Java, C#, JavaScript — security automation, tooling, scripting
Infrastructure	Linux (Ubuntu), Windows Server, macOS, Active Directory, VPN, Firewall, DNS/DHCP, VLAN
Frameworks	CIS Benchmarks, CVSS v3, Secure SDLC, ITIL, SPF/DKIM/DMARC, MFA Enforcement, Least Privilege
Web & Dev	HTML/CSS, React, Angular, Laravel (PHP), ASP.NET Core, REST APIs, Docker (familiar)

Tools	Git, GitHub, VS Code, Slack, Jira, Confluence, Asana, Microsoft 365, Google Workspace
Languages	English (C1 — Advanced), Georgian (Native)

KEY PROJECTS

SecOps Command Center | *Python, Flask, NVD API, CVSS, Threat Intelligence*

- Real-time SOC dashboard pulling live CVEs from NVD API v2, mapping vulnerabilities to asset inventory, and scoring risk using CVSS v3 with asset criticality multipliers to generate a prioritized remediation queue
- Integrated IOC checking against AbuseIPDB threat intelligence with local fallback database; exposes REST API endpoints for CVE data, IOC results, and summary statistics

SIEM Log Analyzer & Dashboard | *Python, Log Parsing, Threat Detection*

- Multi-format log analyzer (Apache, Nginx, SSH, syslog) detecting 10 attack categories including brute force, SQL injection, XSS, directory traversal, and scanner activity
- Generates interactive SIEM-style HTML dashboard with traffic statistics, top IPs, status code breakdown, and severity-classified alert queue — zero external dependencies

Multi-Platform Security Hardening Framework | *Bash, PowerShell, CIS Benchmarks — Linux / macOS / Windows*

- CIS benchmark hardening and audit scripts covering SSH hardening, firewall enforcement, password policies, kernel hardening, and file permission controls across three operating systems
- Audit mode runs read-only PASS/FAIL assessments; hardening mode auto-remediates misconfigurations — validated against live macOS environment

VulnScan — Network Vulnerability Scanner | *Python, Threading, CVE, CVSS*

- Modular multi-threaded TCP port scanner with service/banner detection and CVE-based vulnerability matching covering EternalBlue, BlueKeep, Heartbleed — generates HTML reports with CVSS severity classification

Phishing Awareness Training Platform | *Python, Flask, HTML/CSS*

- Custom phishing simulation platform with realistic fake login pages, click/credential tracking, live campaign dashboard, and automated HTML reporting — full flow from simulated email to awareness education

EDUCATION

B.S. in Informatics | *Georgian-American University — Tbilisi, Georgia* 2022 – 2026 (Expected)

- Focus: Software Development, IT Systems, Networking, Cybersecurity, and Data Analysis
- Relevant coursework: Python Programming, Machine Learning, Web Development, Network Infrastructure, IT Systems Administration

CERTIFICATIONS & TRAINING

- HackTheBox Cybersecurity Training (In Progress) — active hands-on penetration testing and offensive security skills development
- JavaScript & React Development — Geolab Bootcamp
- ITIL Foundation Coursework — IT Service Management principles and best practices
- GitHub Portfolio: github.com/Toshi-hub834 — 5 security projects including live CVE dashboard, SIEM analyzer, vulnerability scanner, and hardening framework
