

GEORGE SKHIRTADZE

IT Support Engineer | Aspiring Penetration Tester & Security Engineer

Tbilisi, Georgia • +995 598 190 497 • skhirtladze2016@gmail.com • toshi-hub834.github.io • linkedin.com/in/george-skhirtladze-04b726272

PROFESSIONAL SUMMARY

IT Support Engineer with 3+ years of hands-on experience across endpoint management, network infrastructure, and security operations. Experienced in managing multi-platform environments (~400 endpoints), scripting automation in Python and Bash, and supporting security processes including phishing simulations and SIEM monitoring. Completing a B.S. in Informatics at Georgian-American University (2026) and actively developing offensive security skills through HackTheBox. Seeking IT support, infrastructure, or security engineering roles on-site in Georgia or remote across Europe.

WORK EXPERIENCE

IT Support Engineer | GSG 2007, Tbilisi, Georgia

July 2024 – Present

- Manage and secure an environment of ~400 endpoints across Windows, Linux, and macOS enforcing disk encryption, MFA, CIS benchmark controls, and least-privilege access policies
- Designed and executed 4 phishing simulation campaigns using GoPhish with custom HTML/CSS email templates and realistic landing pages; click rates dropped to near zero by the second campaign, demonstrating measurable security awareness improvement
- Develop Python and Bash automation scripts for patch compliance, log analysis, and user provisioning reducing manual overhead on routine tasks
- Manage network security infrastructure including VPN, firewalls, DNS/DHCP, and VLAN configuration
- Monitor security events via SIEM; support incident response procedures across multi-platform environments
- Handle full user lifecycle management onboarding, offboarding, account provisioning, and IT asset inventory across the organization

IT Specialist | Finnish International School, Saguramo, Georgia

October 2023 – May 2024

- Administered IT infrastructure for ~15–20 staff and faculty across Windows, macOS, and Linux environments
- Managed Cisco networking equipment and a Dell server; diagnosed and resolved a network routing issue causing print requests from Wi-Fi laptops to fail traced packet loss to a misconfigured route and restored full printer connectivity
- Designed and built a new server rack from scratch for a newly added school department including cabling, hardware installation, and network integration
- Maintained VPN configuration, security policies, patch management, and performed regular security audits to minimize attack surface
- Delivered 1st/2nd line technical support for hardware and software issues across the school campus

TECHNICAL SKILLS

Security: Threat Detection, Incident Response, Phishing Simulation (GoPhish), Vulnerability Management, CVSS v3, SIEM, EDR/XDR, Penetration Testing (Learning), Burp Suite (Learning), Metasploit (Learning)

Scripting: Python, Bash, PowerShell, JavaScript security automation, log analysis, tooling

Infrastructure: Linux (Ubuntu), Windows Server, macOS, Active Directory, Cisco Networking, VPN, Firewall, DNS/DHCP, VLAN

Frameworks: CIS Benchmarks, MITRE ATT&CK, CVSS v3, ITIL, SPF/DKIM/DMARC, MFA, Least Privilege

Tools: Grafana, Git, GitHub, Jira, Confluence, Microsoft 365, Google Workspace, Docker (familiar)

Languages: English (C1 Advanced), Georgian (Native)

KEY PROJECTS

Active Directory Purple-Team Lab | Windows Server 2022, Active Directory, Wazuh SIEM, Sysmon, Kali, Impacket, Hashcat

- Built an isolated Active Directory lab (Windows Server 2022 domain controller, Wazuh SIEM, Kali attacker) to execute and detect AD attacks end-to-end

- Performed Kerberoasting and AS-REP Roasting with Impacket and cracked the captured Kerberos hashes offline with Hashcat
- Authored custom Wazuh detection rules mapped to MITRE ATT&CK (T1558) that surface the attacks as high-severity alerts; enriched domain controller telemetry with Sysmon
- Documented findings and remediation guidance (gMSA, pre-authentication enforcement, ACL hardening)

HoneyTrap Multi-Service Honeypot | *Python, Flask, Socket Programming*

- Simulates SSH, HTTP, FTP, and Telnet services to attract and log attacker interactions in real time
- Flask dashboard provides live attack feeds, geolocation mapping, protocol breakdowns, and session replays designed for threat intelligence and adversary behavior analysis

SecOps Command Center | *Python, Flask, NVD API, CVSS, Threat Intelligence*

- Real-time SOC dashboard pulling live CVEs from NVD API v2, mapping vulnerabilities to asset inventory, and scoring risk using CVSS v3 with asset criticality multipliers to generate a prioritized remediation queue
- Integrated IOC checking against AbuseIPDB threat intelligence with local fallback database; exposes REST API endpoints for CVE data, IOC results, and summary statistics

SIEM Log Analyzer & Dashboard | *Python, Log Parsing, Threat Detection*

- Multi-format log analyzer (Apache, Nginx, SSH, syslog) detecting 10 attack categories including brute force, SQL injection, XSS, directory traversal, and scanner activity
- Generates interactive SIEM-style HTML dashboard with traffic statistics, top IPs, status code breakdown, and severity-classified alert queue with zero external dependencies

Multi-Platform Security Hardening Framework | *Bash, PowerShell, CIS Benchmarks*

- CIS benchmark hardening and audit scripts covering SSH hardening, firewall enforcement, password policies, kernel hardening, and file permission controls across Linux, macOS, and Windows
- Audit mode runs read-only PASS/FAIL assessments; hardening mode auto-remediates misconfigurations validated against live macOS environment

VulnScan Network Vulnerability Scanner | *Python, Threading, CVE, CVSS*

- Modular multi-threaded TCP port scanner with service/banner detection and CVE-based vulnerability matching covering EternalBlue, BlueKeep, Heartbleed generates HTML reports with CVSS severity classification

EDUCATION

B.S. in Informatics | Georgian-American University, Tbilisi, Georgia 2022 – 2026 (Expected)

- Focus: Software Development, IT Systems, Networking, Cybersecurity, and Data Analysis
- Relevant coursework: Python Programming, Machine Learning, Web Development, Network Infrastructure, IT Systems Administration

CERTIFICATIONS & TRAINING

- HackTheBox Cybersecurity Training (In Progress) — active penetration testing and offensive security skills development
- ITIL Foundation Coursework — IT Service Management principles and practices
